

ABSTRACT OF THE DISCLOSURE

Covers, systems and methods for covering boards and deck components, such as the floorboards, side rails, among other elongate structural deck components. In one embodiment, a system for covering a board includes at least one cover and at least two couplings. Each of the couplings is adjacent a corresponding one of the pair of opposed sides of the board. The couplings each define a channel adapted to receive and retain therein a corresponding portion of the cover when the cover is positioned on the board.
